

HTMLmm

1. What is HTML ?

HTML refers to Hyper text Markup Language .

It is used to structure and layout to your web page .

2. Why HTML called Markup Language :

Markup Language are used to Define New Tag

That are used to structure Information .

HTML is Not a Programming Language is a

Markup Language

used for ,

* Structure Information

* Organizing content

3. Different b/w HTML tag and Element :

HTML tag :

HTML tag are Pre-Defined keyword enclosed with

angular - bracket

<a>

a - keyword

HTML element:

Element are making a browser structure then one element have opening tag and closing tag In-between have content. This all 3 combine is known as element.

[<P> This is element </P>] → element

<P> - opening tag

This is element - closing tag content

</P> - closing tag

4) what is <!DOCTYPE html> ?

* The <!DOCTYPE> is an Declaration of html

* We Declared that This Document Interpreted only on HTML 5.

* It is not tag as HTML element.

5) HTML attributes :

The attributes are used to give additional information to tag, element and content.

<a>

href = specified URL link used

src = specified image or location of source

alt = used for extra text photo

width = used for extra adjust width

height = used for adjust height

color = used to apply colour

id = specified unique identifier

class = assign to class name

Ex:

`<img src = "assets | photo | 1.png" alt = "HTML image"`

`width = "25%">`

7) Different b/w src and href ?

src :

src stands for source used to locate local source of

Image .

`<img src = "assets | photo | 2.png" alt = "css image"`
`width = "25%">`

href :

href stands for h reference used for specified URL link to show and navigation .

`<a href = "Page/Task.1/index.html" > About </a>`

8. What purpose of alt attributes in `<img>` tag?

*. Alt used for Extra text to image.

*. This alt used for Identified broken image easily through name.

*. So developer can easily Identified broken image by "name".

Ex;

`<img src = "assets/photo/3.png" alt = "JS Photo" >`

9. Explain Block-level and Inline-element.

Block-level :

Block-level element start with new line and it capture full width of line.

Ex;

`<h1>` This is HTML `</h1>`

`<h>`
`<div>`
`<p>`
`<header>`
`<section>`

→ Block-level

In-line element :

Example : inline element - non

In-line element are not start with new line its start with inside line and it capture only content width. It is also called Helper tag.

Ex:

`<h1><b>HTML</b></h1>`

↳ In-line element

`<span>`

`<italic>`

`<b>`

In-line element

(o) What is semantic HTML? Difference b/w semantic and non-semantic.

Semantic HTML :

Grouping a element that are

Semantic tags are used for easily understand developer and user the line start with Here. It is only used for meaningful tag. ~~Not~~ There is no behaviour.

Ex:

`<section>`

`<h1>HTML</h1>`

`<p>The HTML is markup language</p>`

`</section>`

Non-semantic element :

traverse element

It is also used for grouping element but there is no meaning and no behaviour.

Ex;

<P> This line in HTML <italic>

used for structure <italic>

Non-semantic tags :

Ex;

<div>

Semantic tag :

<h1>

<h2>

<h3>

<h4>

<h5>

<h6>

11) What is different b/w <div> and :

<div>

The <div> is an Non-semantic tag. There is no meaning and behaviour but it's a Block element starting with new line and capture entire width of line.

Ex;

<div>

<h1> HTML </h1>

<P> HTML is a Markup Language </P>

<div>

</div>

This span is a non-semantic tag. There is no meaning and behaviour but it's an in-line element. It is present inside line.

Ex :

<head>

<h1> HTML </h1>

<p> The HTML is an markup language </p>

</head>

12) What is HTML list?

The list has 3 types

i) ordered list -

ii) un-ordered list -

iii) description list - <dl>

i) ordered list :

The ordered list tag are used to order element in numerical. It is structure.

Ex :

1) HTML

2) CSS

3) JAVA

Code:
m

<no2>

This is a simple code to create a list

Example: `<li> HTML </li>` and `<li> CSS </li>`

`<li> CSS </li>` and `<li> JAVA </li>`

`<li> JAVA </li>`

: ex

`<ol>`

`</ol>`

Op:

`<li> HTML </li>`

1. HTML

2. CSS

3. JAVA

ii) un-ordered list:
m m m

1) What is HTML?

The un-ordered element used to produce only

bullet-point and un-structured.

Ex:

`<li> HTML`

`<li> CSS`

`<li> JAVA`

Code:

`<ul>`

`<li> HTML </li>`

`<li> CSS </li>`

`<li> JAVA </li>`

`</ul>`

AVAT (E)

O/p:

HTML

• CSS

• JAVA

3) Description list :

Description list is used for these terms and description

Ex:

<dl>

 The HTML is a markup language

</dl>

O/p:

The HTML is a markup language

13) HTML table tag :

1) <table> :

It is used to activate table element

<table> </table>

2) <tr> :

It is used to mention table row

<tr> </tr>

<th>
m

9/10

It is used to mention table head.

<th> </th>

<td>
m

It is used to mention table data.

<td> </td>

<thead>
m

It is used for Head of table on top and

Block-level

<th> used inside tag.

<thead> </thead>

<tbody>
m

It is used to mention body of table on below and

<tr> used inside Block-level tag.

<tbody> </tbody>

code :

mm

traverser ul border=1 regular view enable it *

<table>

<thead>

<th> No </th>

<th> course </th>

<th> Fee </th>

<tbody>

<tr>

<td> 1 </td>

<td> Full stack </td>

<td> ₹60,000 </td>

</tr>

<tr>

<td> 2 </td>

<td> Claude </td>

<td> ₹55,000 </td>

</tr>

O/P:

No	course	Fee
1	Full stack	₹60,000
2	Claude	₹55,000

4) <meta charset = "UTF-8"> :

* It allows your webpage correctly represent character from many writing system and ~~also~~ symbols, emoji.

Ex ;

English

Hindi

🇮🇳

☺

😊

* Used for correctly Interpret the character.

15) What is OG in meta :

* OG (Open Graph) in meta tag used to control ^{How} the webpage look when they shared on social media platforms like Facebook, WhatsApp.

* Used in <head> section.

<meta property = "og:title" content = "This website for Python programming">
og:title used for title content used social preview

<meta property = "og:type" content = "For programming">
og:type used for define type used social preview

<meta property = "og:image" content = "Profile.jpg">

og:image used for define image used social preview

<meta property = "og:url" content = "https://example.com">

og:url used for define URL of object in social

<meta property = "og:description" content = "This website used for programming like HTML, CSS, Python">
