Task - 1

1) HTML : (Structure of House)

HTML (Hypertext Markup Language) creates the content and structure of webpage.

This creates :

• A Heading → Welcome

• A Paragraph • A Button

2) CSS : (Design / appearance)

CSS (Cascading Style Sheets) changes how HTML looks.

It can control :

• colour

• Font size

• spacing

• Borders

• Layout

• Animations

3) Bootstrap : (Ready-made Design components)

Bootstrap is a CSS framework that gives you ready-made components and responsive layouts.

Bootstrap provides :

• Buttons

• Cards

• Navbars

• Forms

• Tables

• Grid system

• responsive design

4) Tailwind : CSS (utility-based styling tools)

Tailwind CSS also helps you design websites, but instead of using many pre-assigned components, you use small utility classes.

How :

- bg - blue - 500 → blue background
- Py-2 → vertical padding
- Text - white → white text
- Pounded → rounded corners

## 5) Javascript : (action/behavior)

Javascript (JS) makes a webpage interactive.

Javascript Handle :

- Button clicks
- Form validation & calculations
- API call
- dynamic content (e.g. weather updates)

## 6) React : (Building Modern UI) :

React is a Javascript library used to build user interfaces.

Instead of creating one huge HTML page, you can divide the UI component.

React used for :

- Single Page Application
- Dashboard
- E-commerce
- Admin Panel

## 7) SQL : (Database Language)

SQL (Structured Query Language) is to communicate with database.

SQL Database Such as :

- MySQL
- PostgreSQL
- Oracle
- Microsoft SQL Server

## Task - 2

### 1) Product - based company :

A product - based company create its own product and sell it to customers .

Ex;

- 1) Apple creates iPhone and sell them to customers
- 2) Google → Google search, Android.

### 2) Service - based company :

A service - based company provides services to other companies or customers .

Ex; TCS get a project from bank

1) Infosys

Bank

2) Wipro

↓  
Gives software project to TCS

3) Accenture

↓  
TCS Develops the software

↓  
Bank pays TCS

### 3) Learning - based company :

A learning - based company mainly provides education or training

Ex; A company provides a MERN stack course .

Student

↓  
joins MERN course

↓  
learns HTML, CSS, JavaScript, React

↓  
complete project → get job preparation

#### 4) Web Page :

A web page is one individual page on a website.

For Ex ;

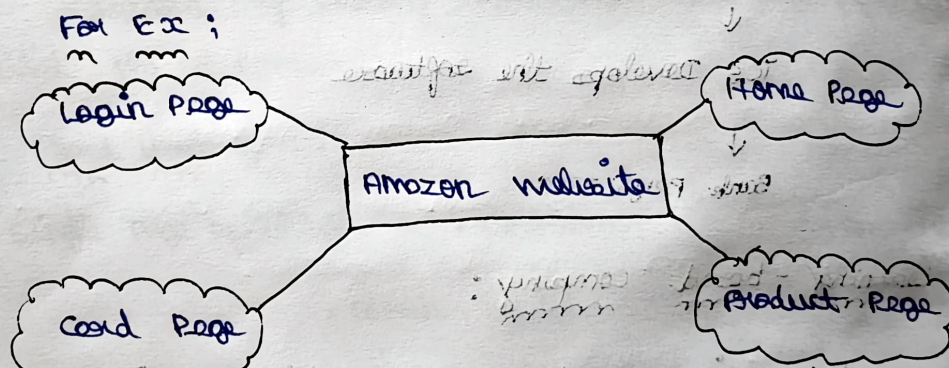

A Amazon website may have various pages like,

- 1) Home Page
- 2) Product Page
- 3) Login Page
- 4) Cart Page
- 5) Contact Page

Web Page = one Page

#### 5) Web Site :

A website is a collection of web pages connected together.

website = collection of web pages

simple ;

Web Page = one Page

Web Site = many connected pages
